Problem Statement: Educating Villagers On Plastic Usage	
No of Clients: 25	

Abstract:

Plastic usage has become one of the major environmental challenges in today's world due to its non-biodegradable nature and harmful impact on ecosystems. Excessive use of single-use plastics such as carry bags, bottles, and packaging materials has led to severe land and water pollution. Marine life, wildlife, and even human health are negatively affected by plastic waste, as it takes hundreds of years to decompose. This project focuses on creating awareness about the dangers of plastic usage and highlights the urgent need to adopt sustainable and eco-friendly alternatives.

The objective of this Project is to educate people about reducing plastic consumption and promoting responsible waste management practices such as recycling and reusing materials. Through surveys, awareness campaigns, and community interaction, the project encourages individuals to shift towards cloth bags, biodegradable products, and proper disposal methods. By spreading awareness and inspiring behavioral change, this initiative aims to contribute towards a cleaner, greener, and more sustainable environment for future generations.

Technology to be used:

- Flutter (Dart) – Frontend
- Firebase – Backend & Database
- VS Code / Android Studio – Development Tools
- GitHub and Git – Version Control
